Construction Hoists

For efficient logistics

BORUIDA PHILOSOPHY: DRIVEN BY INNOVATION

WE ARE GUIDED BY FOUR CORE VALUES:

- SAFETY ABOVE ALL
- FOCUS ON THE CUSTOMER •
- SIMPLICITY DEFINES QUALITY
- THE BEST ISN'T GOOD ENOUGH

At BORUIDA we think that everyone working at heights should be able to do this safely and easily. Innovation is more than just a clever idea.

For us, innovation begins with listening well and discovering what the real needs of our customers and users are.

Through this approach, our modular rack and pinion construction hoists installation has quickly become the new standard for easy and efficient work. Furthermore, this revolution in the field of high lift operation was done without making any concessions in regard to maximum security.

For our full BORUIDA Philosophy, visit china-boruida.com

High-speed, high-efficiency Construction Hoists

The BORUIDA'S new construction hoists are reliable and efficient high-speed construction hoists, offering simplicity of operation, ease of installation and intelligent design with a low total cost of ownership.

Economical

Low cost of ownership for construction and rental companies through durability, accessibility and easy installation and dismantling.

Smooth Operation

Frequency control provides smooth starting and stopping with a low starting current and less wear and tear.

Robust Design

A robust car design with a choice of door and ramp options ensure maximum usability and extended equipment life.

Proven Technology

An easy-to-use control system, based on proven BORUIDA technology, allows for simple operation and ease of use.

Main Characteristics

Safety

Mechanical interlocking door system to guarantee the highest safety standards.

Reliability

High strength steel extends equipment life and reduces dead weight, with a robust design, based on proven BORUIDA technology, the BORUIDA construction hoists are reliable hoist solution that deliver when you need it to.

Efficiency

A high-efficiency helical gearbox assures (75%) lower power consumption and operating costs, compared to competitors' hoist products. Built-in electrical cabinet maximises internal hoist dimensions for increased lifting capacity.

Ergonomic

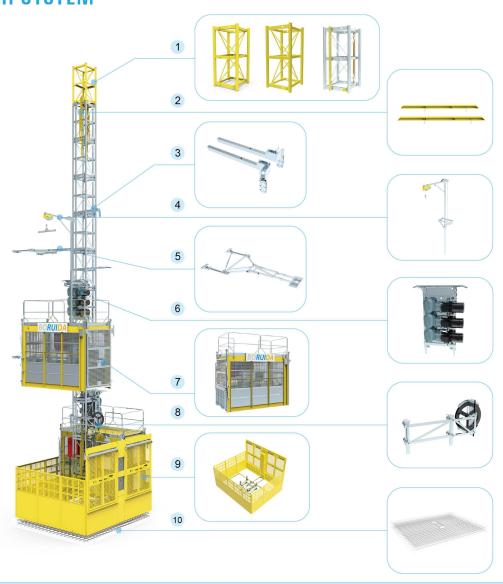

Superior operator adopt a robust design for equipment durability, a choice of door and ramp options ensure maximum usability; easy to use stop-next-landing control system allows for simple operation, LED-light in cage for maximum usability and operator comfort, optional installation crane and single or dual cage available.

BORUIDA CONSTRUCTION HOISTS MODULAR SYSTEM

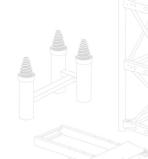

- Mast section
- 2 LS(Limit Swith) cam
- 3 Cable braket

- Electric lifting device
- Mast tie

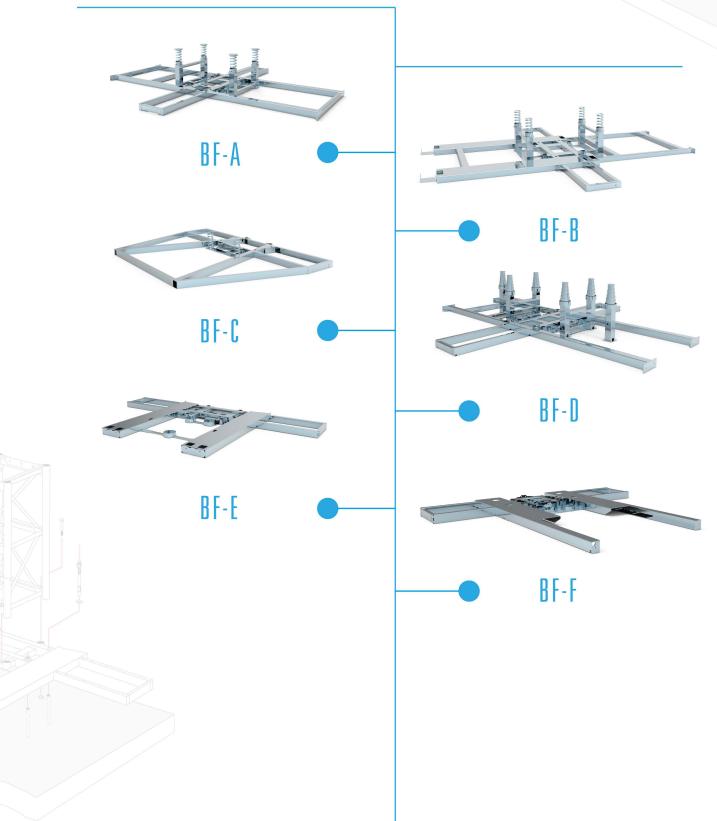

6 Drive unit

- 7 Cage
- 8 Cable trolly
- 9 Enclosure
- 10 Concrete foundation

BORUIDA MODULAR SYSTEM CONSTRUCTION HOISTS BASE FRAME

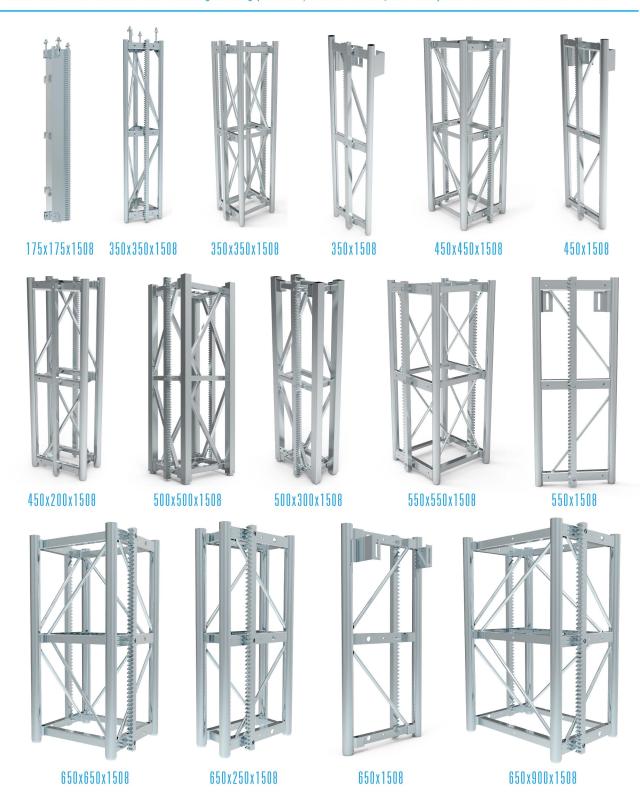

The modular of BORUIDA'S BASE FRAMES design is suitable for a variety of customer needs, using high-quality materials to meet the requirements of various operating conditions. Its surface use hot dip galvanized process, durable. The size can be customized according to site conditions or customer requirements.

BORUIDA MODULAR SYSTEM CONSTRUCTION HOISTS MAST SECTION

The modular family of MAST SECTION design is very suitable for different conditions of application. High quality materials and excellent surface galvanized treatment process determines the stability and reliability of the lift operation. This modular family masts can also be matched mast climbing working platforms, material hoists, rack and pinion industrial elevators and etc.

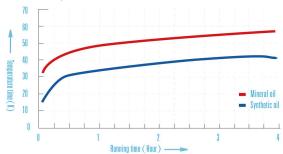

Drive Units Features

▶ High efficiency & Low Energy Consumption

Perfectly combining the new high-precision spiral gears and the hardened helical gears, the transmission efficiency reaches up to 96%.

Low Temperature Rise

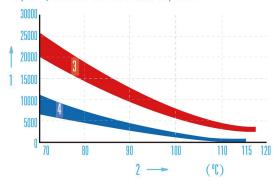

Running with rated load, the oil temperature is measured according to 40% of the working time. Lower temperature of oil can extend the aging of oil seal, the new design for the sealing of shaft and the unique control system can effectively solve the leakage of oil which happens regularly in the market.

Low Vibration & High Impact Resistance & Stable Operation

The gear pair has the advantages of lower noise, the stable transmission as the traditional worm gear, the better shock absorption.

- ◆ Long Service Life & Low Maintenance Cost
- Replacement time of lube oil: synthetic oil-less than 4 years, mineral oil-less than 2 years.
- ◆ Replacement time of lube oil: synthetic oil-less than 4 years, mineral oil-less than 2 years.

- 1 -Working hours
- 2 -Oil temperature
- 3 -Synthetic oil
- 4 Mineral oil
- Just pour 3L lube oil into the reducer
- More reasonable design for the gear meshing

BORUIDA

Colors can be customized according to customer requirements

In the form of a variety of doors to suit different bunicounsured cougitions

Atmospheric and beautiful Carrying capacity ranging from 300kg to 3200kg

Door set with the mechanical and electrical interlocks to ensure maximum personal safety

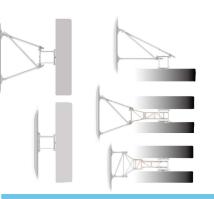

Provided with overload protection system

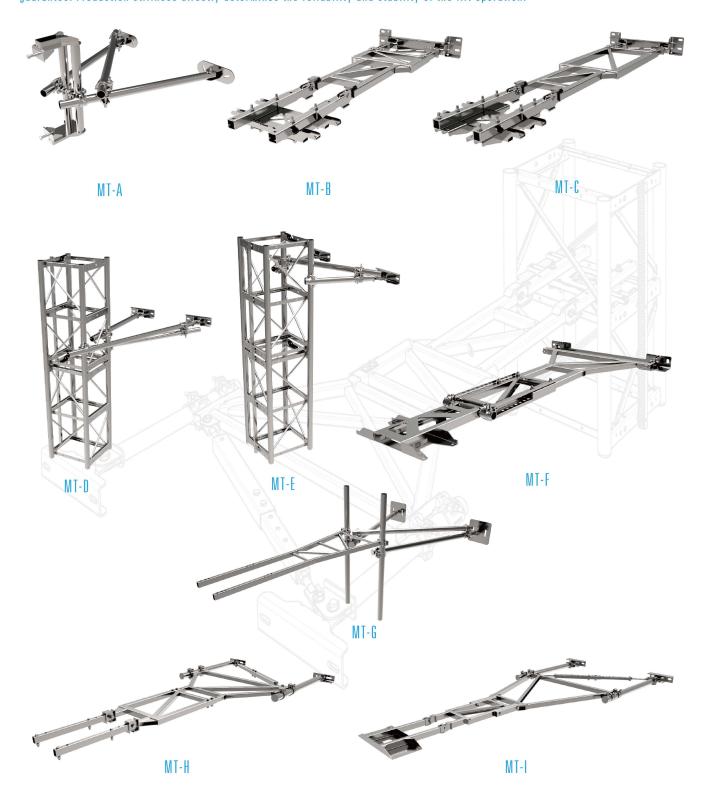

Provided with failure protection system. intelligent judgment, and easy maintenance

BORUIDA MODULAR SYSTEM CONSTRUCTION HOISTS MAST TIE

Mast ties are special forced steel brackets and can be easily deformed. Used for construction hoists, material hoists, mast climbing working platforms, industrial lifts orbit. Because of widely interchangeability, requirement of high rigidity, and need for stable tooling guarantee. Production stiffness directly determines the reliability and stability of the lift operation.

ABOUT BORUIDA

BORUIDA wins a good reputation all over the world, which is a high-tech enterprise, we only focus on construction machinery equipment. We specialize in the integration of production design, manufacture, export, and installation.

Our portfolio includes:

Innovation drives us to constantly surprise you value!
